*Source: EUROMONITOR INTERNATIONAL Air fryers is per light fryers category definition;
Consumer Appliances 2026 edition, retail volume sales in units, 2025 data.

2. Enjoy healthy food with up to 90% less fat* : **Compared to homemade fries cooked in a conventional deep fat fryer.

RapidAir Technology

A unique “starfish” design, which swirls hot air to create delicious foods that are crispy on the outside and tender on the inside, with little to no added oil.

Powered by
Starfish Design

1. Even Air Circulation

The starfish-shaped bottom ensures 360° airflow, leading to uniform cooking without flipping.

2. Faster Cooking Time

Rapid air movement cooks food quicker and more efficiently.

3. Crispier Results with Less Oil

Achieves a deep-fried texture using little to no oil.

4. Reliable & Consistent Results

Reduces cold spots and ensures even browning every time.

Non RapidAir Technology

Basic fan and heating system, that lacks the optimized airflow technology that the Rapid Air Plus starfish design offers.

1. Uneven Heat Distribution

Airflow may be less optimized, often requiring shaking or flipping.

2. Longer Cook Times

Slower air circulation means more waiting.

3. Inconsistent Texture

Food may cook unevenly or not crisp up as well.

4. Higher Oil Dependency

Often needs added oil or sprays to get close to crispiness.
